FOREWORD

The correct identification of organisms is fundamental not only for the assessment and the conservation of biodiversity, but also in agriculture, forestry, the food and pharmaceutical industries, forensic biology, and in the broad field of formal and informal education at all levels. However, since the first Meeting of the Systematics Association on «Biological identification with computers», in 1973, few scientific events have been dedicated to this subject. Furthermore, taxonomists, workers in biodiversity informatics, and the large community of users are rarely all gathered together.

Since the 1990s, the number of projects developing information repositories has greatly increased: Fishbase, GBIF, Species 2000, OBIS, EuroMedPlantBase, Fauna Europaea, EoL etc. to cite only some of them. Until now, identification tools were poorly represented in such systems. This is already changing, and Fishbase is a good example illustrating the need to include identification facilities with biodiversity databases, and to adapt the keys to different types of users. International conferences on biodiversity research, tools and methods using ICT, are becoming more and more numerous. In the last decades, important advances have taken place in the ways identification is carried out, from molecular and biochemical methods of rapid identification to the development of interactive identification systems based on morpho-anatomical data. The effort to propose and to popularize identification tools using all types of biological characters (sequences, morphology, images, sounds etc.) must be continued.

The event «Tools for identifying biodiversity: progress and problems» offers an opportunity to provide an overview of recent advances in this field. It aims at stimulating integration of existing methods and systems, fostering communication amongst different research groups, and laying the foundations for integrated projects in the next decade. The congress was organised jointly by three large European projects dedicated to biodiversity and/or biological identification: KeyToNature, EDIT (European Distributed Institute of Taxonomy), and STERNA (Semantic Web-based Thematic European Reference Network Application).
The scientific program of the congress was subdivided into four sessions:

- Interactive identification tools based on morpho-anatomical data
- Molecular and biochemical methods for the identification of organisms
- Identification and education
- Industrial and practical applications of the new identification tools: case-studies and markets

In this book, the reader will find short presentations of current and upcoming projects (EDIT, KeyToNature, STERNA, Species 2000, Fishbase, BHL, ViBRANT, etc.), plus a large panel of short articles on software, taxonomic applications, use of e-keys in the educational field, and practical applications. Single-access keys are now available on most recent electronic devices; the collaborative and semantic web opens new ways to develop and to share applications; the automatic processing of molecular data and images is now based on validated systems; identification tools appear as an efficient support for environmental education and training; the monitoring of invasive and protected species and the study of climate change require intensive identifications of specimens, which opens new markets for identification research.

Pier Luigi Nimis, Régine Vignes Lebbe

Trieste – Paris, September 2010
# Table of Contents

Devising the EDIT Platform for Cybertaxonomy .............................................. 1  
Walter G. Berendsohn

Descriptive Data in the EDIT Platform for Cybertaxonomy ............................ 7  
Maxime Venin, Agnes Kirchhoff, Hélène Fradin, Anton Güntsch, Niels Hoffmann, Andreas Kohlbecker, Elise Kuntzelmann, Öna Maiocco, Andreas Müller, Régine Vignes Lebbe, Walter G. Berendsohn

An online authoring and publishing platform for field guides and identification tools ......................................................................................... 13  
Gregor Hagedorn, Gisela Weber, Andreas Plank, Mircea Giurgiu, Andrei Homodi, Cornelia Veja, Gerd Schmidt, Pencho Mihnev, Manol Roujnov, Dagmar Triebel, Robert A. Morris, Bernhard Zelazny, Edwin van Spronsen, Peter Schalk, Christian Kittl, Robert Brandner, Stefano Martellos, Pier Luigi Nimis

A search tool for the digital biodiversity resources of KeyToNature .......... 19  
Mircea Giurgiu, Andrei Homodi, Cornelia Veja, Gregor Hagedorn, Pier Luigi Nimis

Developing Web-based Search Portals on Birds for Different Target Groups ................................................................................. 25  
Renate Steinmann, Andreas Strasser, Andrea Mutrenin, Amy Trayler, Sander Pieterse, Ivan Teage, Michael De Giovanni, John J. Borg, Noel Zammit

Simple Identification Tools in FishBase .......................................................... 31  
Nicolas Bailly, Rodolfo Reyes Jr., Rachel Atanacio, Rainer Froese

The Catalogue of Life: towards an integrative taxonomic backbone for biodiversity ......................................................................................... 37  
Frank A. Bisby, Yuri R. Roskov

BHL-EUROPE: Biodiversity Heritage Library for Europe .............................. 43  
Jana Hoffmann, Henning Scholz

A Pan-European Species-directories Infrastructure (PESI) ............................. 49  
Yde de Jong

ViBRANT—Virtual Biodiversity Research and Access Network for Taxonomy ................................................................................................. 53  
Dave Roberts, Vince Smith

Identifications in BioPortals™ ........................................................................ 55  
Wouter Addink, Edwin van Spronsen, Peter H. Schalk

Types of identification keys ........................................................................... 59  
Gregor Hagedorn, Gerhard Rambold, Stefano Martellos

Learning, Identifying, Sharing ..................................................................... 65  
Philippe A. Martin, Noël Conruyt, David Grosser
Identification with iterative nearest neighbors using domain knowledge ........ 71
David Grosser, Noël Conruyt, Henri Ralambondrainy

A MediaWiki implementation of single-access keys ................................. 77
Gregor Hagedorn, Bob Press, Sonia Hetzner, Andreas Plank, Gisela Weber,
Sabine von Mering, Stefano Martellos, Pier Luigi Nimis

Simple matrix keys from Excel spreadsheets ........................................ 83
Gregor Hagedorn, Mircea Giurgiu, Andrei Homodi

Wiki keys on mobile devices ................................................................. 89
Gisela Weber, Gregor Hagedorn

A Wiki-based Key to Garden and Village Birds ..................................... 95
Tomi Trilar

Wiki-keys for the ferns of the Flora of Equatorial Guinea ..................... 99
Francisco Cabezas, Carlos Aedo, Patricia Barberá, Manuel De la Estrella, Maximiliano Fero,
Mauricio Velayos

MyKey: a server-side software to create customized decision trees .......... 107
David Gérard, Réjine Vignes Lebbe

Xper²: managing descriptive data from their collection to e-monographs .... 113
Visotheary Ung, Florian Causse, Réjine Vignes Lebbe

FRIDA 3.0 Multi-authored digital identification keys in the Web ............ 115
Stefano Martellos

Flora Bellissima, an expert software to discover botany and identify plants ................................................. 121
Thierry Pernot, Daniel Mathieu

Modifiable digital identification keys ..................................................... 127
Edwin van Spronsen, Stefano Martellos, Dennis Seijts, Peter Schalk, Pier Luigi Nimis

The Open Key Player: A new approach for online interaction and user-tracking in identification keys .................................................. 133
Mircea Giurgiu, Andrei Homodi, Edwin van Spronsen, Stefano Martellos, Pier Luigi Nimis

Improvement of identification keys by user-tracking ................................ 137
Gerd Schmidt, Mircea Giurgiu, Sónia Hetzner, Fred Neumann

ARIES: an expert system supporting legislative tasks. Identifying animal materials using the Linnaeus II software ............................................. 145
Leo W.D. van Raamsdonk

An integrated system for producing user-specific keys on demand: an application to Italian lichens ....................................................... 151
Juri Nascimbene, Stefano Martellos, Pier Luigi Nimis

“Flora Italiana Digitale”: an interactive identification tool for the Flora of Italy ................................................................. 157
Riccardo Guarino, Sabina Addamiano, Marco La Rosa,
Sandro Pignatti
eFlora and DialGraph, tools for enhancing identification processes in plants ................................................................. 163
Fernando Sánchez Laulhé, Cecilio Cano Calonge, Antonio Jiménez Montaño

A catalogue of bird bones: an exercise in semantic web practice .......... 171
Gudmundur Gudmundsson, Seth D. Brewington, Thomas H. McGovern, Aevar Petersen

Anthos.es: 10 years showing Spanish plant diversity information in the Internet ........................................................................ 177
Leopoldo Medina, Carlos Aedo

An interactive tool for the identification of airborne and food fungi ......... 183
Giovanna Cristina Varese, Antonella Anastasi, Samuele Voyron, Valeria Filipello Marchisio

The Estonian eFlora ........................................................................ 189
Tiina Randlane, Malle Leht, Andres Saag

Keys to plants and lichens on smartphones: Estonian examples ............ 195
Andres Saag, Tiina Randlane, Malle Leht

IIKC: An Interactive Identification Key for female Culicoides (Diptera: Ceratopogonidae) from the West Palearctic region ................. 201
Bruno Mathieu, Catherine Cêtre-Sossah, Claire Garros, David Chavernac, Thomas Balenghien, Régine Vignes Lebbe, Visotheary Ung, Ermanno Candolfi, Jean-Claude Delécolle

Indochinese bamboos: biodiversity informatics to assist the identification of “vernacular taxa” ..................................................................... 207
My Hanh Diep Thi, Régine Vignes Lebbe, Ha Phuong Nguyen, Bich Loan Nguyen Thi

Identification tools as part of Feedsafety research: the case of ragwort ...... 213
Leo W.D. van Raamsdonk, Patrick Mulder, Michel Uiterwijk

Two identification tools applied on Mascarene’s corals genera (Xper²) and species (IKBS) ........................................................................ 217
Yannick Geynet, Noël Conruyt, David Grosser, Gérard Faure, David Caron

Interactive, illustrated, plant identification keys: an example for the Portuguese flora ........................................................................... 219
Maria Helena Abreu Silva, Rosa Maria Ferreira Pinho, Lísia Graciete, Martins Pereira Lopes, Paulo Cardoso da Silveira

The ORCHIS software used to identify 100 orchids species of Lao PDR .... 221
Pierre Bonnet, André Schuiteman, Boukhaykhone Svengsuksa, Daniel Barthélémy, Vichith Lamxay, Souliavanh Lanorsavanh, Khamfa Chanthavongsa, Pierre Grard

A collaborative and distributed identification tool for plants ...................... 223
Philippe Laroche

Alternative 2D and 3D Form Characterization Approaches to the Automated Identification of Biological Species ........................................ 225
Norman MacLeod
VeSTIS: A Versatile Semi-Automatic Taxon Identification System from Digital Images ........................................................................................................................................... 231
Nikos Nikolaou, Pantelis Sampaziotis, Marilena Aplikioti, Andreas Drakos, Ioannis Kirmitzoglou, Marina Argyrou, Nikos Papamarkos, Vasilis J. Promponas

Iterative Search with Local Visual Features for Computer Assisted Plant Identification ........................................................................................................................................... 237
Wajih Ouertani, Pierre Bonnet, Michel Crucianu, Nozha Boujemaa, Daniel Barthélémy

Image data banks and geometric morphometrics ........................................................................................................................................... 243
Anna Loy, Dennis E. Slice

Outline analysis for identifying Limodorum species from seeds ........................................................................................................................................... 249
Sara Magrini, Sergio Buono, Emanuele Gransigh, Massimiliano Rempicci, Silvano Onofri, Anna Scoppola

Geometric morphometrics as a tool to resolve taxonomic problems: the case of Ophioglossum species (ferns) ........................................................................................................................................... 251
Sara Magrini, Anna Scoppola

Geometric morphometric analysis as a tool to explore covariation between shape and other quantitative leaf traits in European white oaks ........................................................................................................................................... 257
Vincenzo Viscosi, Anna Loy, Paola Fortini

Landmark based morphometric variation in Common dolphin (Delphinus delphis L.,1758) ........................................................................................................................................... 263
Paola Nicolosi, Anna Loy

DNA barcoding: theoretical aspects and practical applications ........................................................................................................................................... 269
Maurizio Casiraghi, Massimo Labra, Emanuele Ferri, Andrea Galimberti, Fabrizio De Mattia

Strength and Limitations of DNA Barcode under the Multidimensional Species Perspective ........................................................................................................................................... 275
